

Welcome to CSP Technologies

CSP Technologies are developers of software applications and tools in Java, .NET, and C++ for Microsoft Windows and Linux operating systems using object oriented technologies. We maintain our focus on application development. We provide full life cycle software development services. We can provide these services separately or in combination, as needed by the client:

- Requirements Gathering
- Analysis
- Design
- Development
- Testing
- Deployment

CSP combines the best practices from Extreme Programming (XP) with our extensive experience in delivering robust, reliable, well designed, software to ensure our clients receive their product on time and within budget.

We have extensive experience in data communications, real-time simulations, user interface design, client/server relational database applications, and server based n-tier web applications.

We have extensive experience in data communications, real-time simulations, user interface design, client/server relational database applications, and server based n-tier web applications. Our recent list of clients includes:

- The US ARMY
- The Bank of New York
- AT&T/Lucent
- ITT Avionics
- Novartis Pharmaceuticals
- Booz Allen Hamilton
- SAIC
- Lockheed Martin

Our Projects section contains samples and descriptions of the tasks we have performed for these clients.
