

CSP Technologies Services

CSP Technologies specialize in object oriented applications design and development utilizing Java, .NET, Visual C++, SQL Server, Internet Information Server, J2EE, Apache Tomcat, BEA WebLogic.

We have real world experience in:

- Web Services: We have developed fielded software using BEA WebLogic and Apache Tomcat. We are currently testing products with IBM WebSphere.
- Java: We have delivered Web portlets, as well as high performance commercial grade applications developed in Java.
- CORBA: We have designed IDL for our clients and implemented high performance CORBA clients in Java and C++ using TAO and the ORB available in the Sun Java JDK, and have demonstrated successful interoperability across languages and platforms.
- WSDL/XML/XML Schema (XSD)
- C++: Many of our developers cut their teeth working with C++ at Bell Labs as it evolved.
- Microsoft Windows: We have been programming Windows since version 2.0. We have extensive experience in developing software for all Microsoft Windows platforms.
- Client/Server Database: We have extensive experience with transaction based client/server applications development and relational database design.
- Data Communications: Our developers have produced many tools for creating robust, reliable TCP/IP, Asynchronous, and X.25 communications applications.
